

# MACAU CONVENTION CENTRE

## MACAU

### Location

Macau

### Program

Observation & Communication Tower

### Time of Project

Start 1998 - Completed 2001

### Client

Stanley Ho

### Value of Project

\$80,000,000.00

### Project team

Gordon Moller, Paul Heather

### Project Description

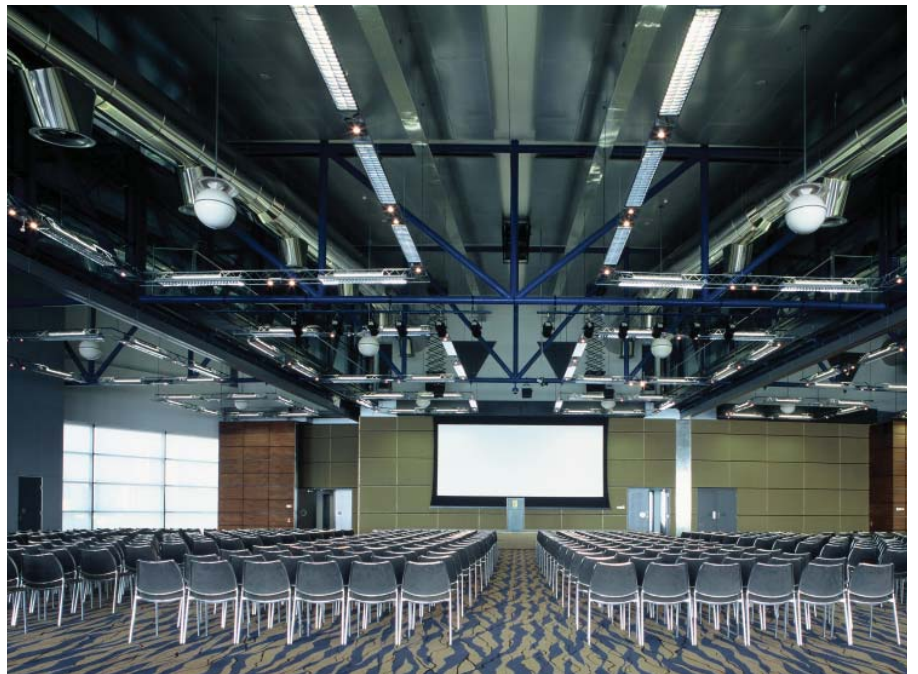

A six level building comprising restaurants, cafes, a convention centre, a 500 seat live theatre and retail centre. It is located on a 13,000m<sup>2</sup> site on the edge of the Pearl River in Macau.

Extensive plazas and boardwalks include water features and fountains, sculptures, a children's playground including a carousel, an outside performance area and a giant video wall.

The forms of the centre are dramatic with the urban design principles of Nam Van Lakes, and the surrounding new waterfront development, being respected and articulated.

The building is curved, the ground floor promenades, cafes, and restaurants open onto open plazas and courtyards. Materials used are stainless steel, zinc, aluminum, glass, marble and granite, with extensive paved and landscaped areas
